Great workshop on Code Review by Jim Priest ([The Crumb](#)). Jim demoed a product called [Review Board](#) a product that integrates with Git or SVN and provides a mechanism and workflow for reviewing code in a team. Like coding standards it is probably more important that you do review code than exactly *how* you review it. Spending some time looking at what you and your team is doing with an eye toward improvement and consistency. Great Seminar Jim - I learned a lot.

Addendum - Jim also mentioned [Smart Bear](#) as a good resource for code reviews.
