CF Webtools is looking for Coldfusion developers. We have opportunities for 2 developers to start ASAP. These positions are located here in Omaha NE - the jewel of the Midwest and the best kept secret in the U.S. We will consider tele-commuting on a temporary basis. We offer a competitive salary, health, disability, life ins., and 401k (immediately vested). We have exciting, cutting-edge projects in CF 7 and Flex. We offer flexible work hours (1 day a week telecommute option), bonus structure and referral incentives, and a great crew to join. If you are interested, **send me your resume**. More about the position below.

While we are seeking 1 novice and 1 advanced programmer, we would entertain other possibilities. If you know of someone who is just starting out and wants a great opportunity, don't hesitate to have them call us or send a resume.

### Job Description

- Must have some level of Coldfusion programming
- Any other technical skills would be a plus - Linux experience, PHP, server configuration, DBA, familiarity with different database platforms, SDLC experience and the like.
- Must be knowledgeable in other aspects of web development like HTML, CSS, XHTML etc.
- Must work well with others, but also be able to work independently based on a project specification.
- Must be able to Golf - or at least talk about sports occasionally. Ok, this is not a real requirement, but you will have more fun at the water cooler.
- Must have an aptitude for grasping and mastering new technologies as they emerge. We are currently moving into Flex development.

Salary is based on experience but we are very competitive. Omaha is a great place to live with a low cost of living (housing is steal at the moment).
