CFCHART Workaround for labeling horizontal charts

This is a nice tip from **Dan Switzer** on a fix for a tricky cf chart labeling problem. Sometimes when using an overlapping horizontal bar chart, the labels fail to appear or go missing. In this example from **Robi Sen**, the first and third labels are there but the middle label is missing.

The fix is to edit an XML file found in the CFusionmx7/charting/styles folder. Here's the fix as Dan Describes it:

- Go to your CFusionMX7\charting\styles folder
- Backup the "default.xml" file
- Take off the "read only" attribute of the default.xml file.
- Open the default.xml file for editing.
- Find the lines below

```
"true" orientation="Horizontal"/>

"Arial-12-bold" isMultiline="false"/>
```

- Change the tag's "isHidOverlapped" attribute to false.
- Save the file.

In experimenting Robi Sen also added the following node:

```
"Value" placement="inside" foreground="black"/>
```

To make the data labels show "inside" the chart.
