

## Adding an image to a CFGRID

Silly me, I assumeed you couldn't insert images into a flash CFGRID. I stumbled across this example on an excellent blog by [As Fusion](#) (laura Arguello and Nahuel Foronda). Apparently you can insert thumbnails right into the grid using an HTML element. That's a new one on me. The trick is to bind a column in the grid to a CfFormItem. As always, someone will always find a way.

```
<cfform name="myform" format="Flash" height="450" width="600" >
<cfgrid name= "grid" query="properties" height="200">
<cfgridcolumn name="city" header="City">
<cfgridcolumn name="photo" header="Photo">
</cfgrid>
<!-- show the picture in an html cfforitem
paragraph is added because Firefox sometimes fail to load the picture --->
<cfformitem type="html" height="200" width="300"
bind="{<p><img src=\"images/'+grid.selectedItem.photo+ '\"></p>}"></cfformitem>
</cfform>
```
