We are looking for a VueJS developer. This dev will be doing UI on one of our most active and dynamic customers. There is a Lot of activity and excitement. This is a full time remote position with good salary and benefits for a *US Based* developer - with the Muse's apology to my many friends across the water. Here's some of the skills you will need:

- VueJS version 2
- Vuex
- Vue component usage and creation
- ES6 style coding
- Inline page coding - no webpack/node setups currently

If you have all or most of those items I really want to talk to you. And that's actually pretty cool because I'm hard to get ahold of.

Other Stuff

You'll need some familiarity with JQuery and plugins as well as Bootstrap and plugins. As far as the backend stuff, it is not as crucial for this position as the front end but here's what I have to work with.

- Command Box running Lucee 5.3 - that's a ColdFusion framework on an open source CFML platform
- MSSQL
- MVC architecture - beans and services
- Handlers set up for VueJS interaction in most cases delivering JSON back to Vue

If this list is unfamiliar but doesn't scare you I still want to talk!

Contacting the Muse

If you want to take a shot send your resume to jobs@cfwebtools.com or call (402) 408-3733 ext 105 and ask for the Muse or ask Rachel (who will probably answer). She will get you going. I will respond directly to this posting.
